

GM Crops in THAILAND

Farmers' Perspective

Sukan Sangwanna

Secretary General

Federation of Agricultural Safety

GM crops are useful and solving problems of crop production for farmers

- Reduce damages from surrounded conditions that threaten the disasters.
- Reduce the use of chemicals in crop production.
- High productivity.

- **GM crops solve farmers' problems quickly and develop better crops than conventional varieties.**
- **Product's quality is the same as standards.**

Farmers afraid of GM crops or not?

- Farmers are not afraid of GM crops because they are more advantages than disadvantages.
- Farmers can control and completely manage.
- GM crops and biotechnology are based on science that humans know.
- Products of GM crops look like normal crops.

How to use GM crops in Thailand?

- Use GMOs crops with out biosafety law.
- Approval and amendment of biosafety law.

GM Crops

- Knowledge of GM crops is fading away from the education system, government and business sectors.
- GM crops have been opposed by NGOs.
- NGOs do not mention or concern of the vast and continuous import of GM crop product.
- There is a tangible scientific talk and a view of the normality of GM crops
